ADITYA AVINASH WAKALKAR

wakalkaraditya@gmail.com | +91 7588662926 | Pune, Maharashtra
My Portfolio | GitHub | LinkedIn | HackerRank

Summary

Software Developer with hands-on experience in building full-stack applications and AI-powered solutions. Experienced in developing web applications, training deep learning models, integrating AI APIs, and working with databases and REST APIs to solve real-world problems. Strong problem-solving skills and an interest in emerging technologies.

Technical Skills

Languages: Java, Python, C++, C#
Frontend: HTML, CSS, JavaScript, React.js
Backend: Node.js, Express.js, REST APIs
Databases: MySQL, Supabase
Fundamentals: DSA, OOP, DBMS, SDLC, Networking Fundamentals, AIML Fundamentals
Tools: GitHub, Git, Vercel, Linux, Eclipse, VS Code, Google Colab, Postman, Android Studio

Projects

- **Mess Finder** | *React.js, Node.js, Supabase, Google Analytics* | `messfinder.vip`
  - Built a hyperlocal platform to discover nearby mess services with real-time information, targeting students.
  - Integrated Google Analytics to track user behavior and growth, achieving 1.97K active views in early stages.
  - Accumulated 1.97K total views and 197 registered users, demonstrating strong organic growth and platform adoption.
- **AI Medical E-Commerce & ERP Platform** | *React.js, Node.js, Express.js, Supabase, Gemini AI* | Live Project Link
  - Developed a full-stack medical e-commerce platform featuring 20+ responsive UI components, secure authentication, and order management using Supabase.
  - Integrated AI chatbot for symptom-based recommendations, OCR prescription analysis, and drug interaction alerts.
  - Architected an automated B2B Procurement (ERP) module, featuring dynamic Purchase Order generation, Supplier Directory management, and smart inventory synchronization that auto-updates stock ledgers.
- **FreshCheck AI** | *TensorFlow, FastAPI, OpenCV, JavaScript, Render* | Live Project Link
  - Architected an end-to-end agricultural quality control dashboard, deploying an asynchronous REST API (FastAPI, Uvicorn) to handle dynamic image preprocessing and serve real-time AI inferences
  - Engineered a multi-task deep learning architecture using TensorFlow and MobileNetV2 on a 53,000+ image dataset, achieving 84% classification accuracy across 16 produce classes and 99% accuracy in binary spoilage detection.
  - Integrated Explainable AI (XAI) using OpenCV to generate real-time activation heatmaps, providing visual transparency into the neural network's decision-making process.
- **AI-Powered Health Monitoring System** | *React.js, Express.js, Supabase, ESP32, Groq API* | Live Project Link
  - Built a real-time full-stack health platform to monitor patient vitals (temperature, SpO2) from IoT hardware (ESP32 microcontroller) via a secure REST API.
  - Integrated the Groq API (Llama 3) and Tesseract.js OCR to generate AI-powered medical report summaries and intelligent health assistance.
  - Developed a comprehensive patient dashboard featuring real-time data visualization, secure appointment scheduling, multi-language support, and an interactive nearby hospital finder with Google Maps integration.

Achievements

- Gold Badge in Java – HackerRank (288+ points)
- Finalist – GHR 2.0 Hackathon

Education

D.Y Patil College of Engineering, Pune, Maharashtra **2022 – 2026**
B.E. Electronics & Telecommunication Engineering | CGPA: 7.6/10

XII – Vivekanand Pratishthan Jr. College, Jalgaon, Maharashtra **2022**
Percentage: 74.67%

X – St. Joseph's Convent Sr. Sec. School, Jalgaon, Maharashtra **2020**
Percentage: 78.40%

Certifications

- Java 17 Masterclass – Udemy | Certificate Link — July 2024
- Full Stack Development – Simplilearn | Certificate Link — Oct 2025
- YUVA AI For All – IndiaAI (through TCS iON) | Certificate Link — May 2026
